AUTOMATE AND SECURE DOCUMENTS AND INFORMATION - IMPROVE BUSINESS EFFICIENCY

Convert purchase orders, checks, invoices and statements, expense reports and all of your IBM i documents into secure portable document format (PDF)

Organizations create and transport a variety of files on a daily basis. In most cases, the information contains private data, and certain document protection steps need to be taken to keep content secure. Businesses find that using portable document format (PDF) files is a secure, dependable, and convenient way to distribute private information over business networks and the internet.

ACOM furthers the effective use of portable document format for iSeries/AS400 by automating the production of PDF documents when running reports you spool on your system. Once information is spooled EZPDF automatically converts into a PDF document and electronically archived for later viewing, secure web posting, printing and distribution - checks, invoices, statements and all your business documents into viewable and fully searchable PDF's that can be read anywhere on any device and web browser.

EZPDF works seamlessly with EZeDocs eForms merging any form with a spool file; EZPDF then automatically converts the merged spool file into a PDF formatted document. It's that simple and streamlined in operation - and all without any complex setup or implementation.

EZPDF functions include:

- * PDF command available in eForms and Checks module
- * Identify specific directories on the IFS
- * Convert SCS spool files to PDF
- * Create clor, fully text searchable PDF documents of any type
- * API available for embedding in CL programs
